## Reference letter

December 21, 2018

### To whom it may concern:

It is with great pleasure that I recommend Viacheslav V. Danilov to you. He visited the Biomedical Imaging Technologies Group (School of Telecommunications Engineering, Technical University of Madrid) for 4 months. During his stay in Madrid, I was a scientific supervisor of his research.

The research study of Viacheslav was related to biomedical imaging field. He was working on the problem related to localization and segmentation of medical devices during minimally invasive endovascular image-guided surgery. To achieve the final aim, Viacheslav applied such techniques as exploratory data analysis, machine and deep learning, hyperparameter optimization and fine-tuning.

Besides the main research study, he attended additional courses such as "Advanced methods in medical signals and images", "Predictive and descriptive learning", "Machine learning lab" and "Data science foundation and applications". He regularly participated in different scientific events such as a hackathon by McKinsey & Company, "Artificial intelligence visual fingerprints at scale" conference by Shazura, "Big data for data scientist: technologies, architectures and professional roles" conference by KEEDIO, and "Internet for all: data science for connecting people in rural areas" conference by Telefónica.

Concluding I would like to say that within the period of the research, Viacheslav has shown himself as a passionate science learner, self-motivated solution seeker, creative problem solver, open-minded and hard-working scientist with the comprehensive knowledge in different areas. Whereas his ability to perform a research from the initial stage until obtaining findings and his good communication skills add value to his self-developed skills.

Best regards,

Prof. María Jesús Ledesma-Carbayo  
Biomedical Imaging Technologies Group  
ETSI Telecomunicación  
Universidad Politécnica de Madrid
